DETAILED ACTION

1. This office action is in response to application 09/708,572 filed on 11/9/2000.

Claims 1-8 remain pending in the application.

Election/Restriction

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

Group I. Claims 1 and 5, drawn to a design data processing method of processing hierarchically configured design data, classified in class 716, subclass 2.

Group II. Claims 2 and 6, drawn to a design data processing method of processing design data configured of a plurality of blocks, classified in class 716, subclass 13.

Group III. Claims 3 and 7, drawn to a design data processing method of processing design data of wiring, classified in class 716, subclass 12.

Group IV. Claims 4 and 8, drawn to a design data processing method of processing design data configured of a plurality of blocks, classified in class 716, subclass 10.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I, Group II, Group III and Group IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as

claimed does not require the particulars of the subcombination as claimed because the invention Group II, III and IV do not require step c) as in the invention Group I; the invention Group I, III and Group IV do not require step c) as in the invention Group II; the invention Group I, II and IV do require step c) as in the invention Group III; and the invention Group I, II and III do require step c) as in the invention Group IV . The subcombination has separate utility such as the invention Group I, III and IV lack a display unit for displaying a peripheral portion of the block of the second design data, and setting the peripheral portion to a wiring inhibition region as in the invention Group II; the invention Group I, II and IV lack wiring density as in the invention Group III; and the invention Group I, II and III lack layout optimization as in the invention Group IV.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is reminded that the required for response to this requirement is **30** days, not one month.
